

ESE 650 Homework 3 - Gesture Recognition with an HMM

Tarik Tosun

March 4, 2014

Data Processing

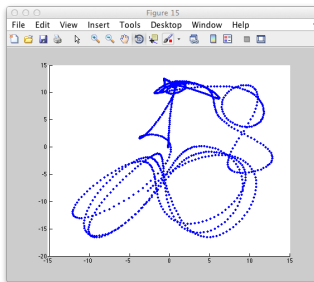

Accelerations only Using gyro did not improve results

Band-Pass Filter 0.2Hz - 10Hz

K-Means Clustering to generate codebook

(a) Unfiltered

(b) Band-pass filtered
(0.2-10Hz)

Figure: 3D plot of figure8 (#1) acceleration data. Horizontal axis is X, vertical is Z.

HMM Results

Cyclic HMM Left-to-right, but loops back to start at end

Parameters 6 clusters (emission symbols), 2 hidden states

Results

- ▶ about 10% LOOCV error

Analysis

Circle

Figure 8

Fish

Hammer

Pendulum

Wave

Figure: Clustered acceleration data for the six gestures
